## HAVE A SMALL TALK WITH YOUR CONSUMER

**More and more customers worldwide are requesting Tear Tapes with messages for consumer communication to distinguish their product from others. Now it is easier than ever before to customise your Tear Tape. But are all Tear Tapes created equally?**

toptape® offers you new possibilities for an even better communication with your consumers. It provides you with a comfortable opening functionality for a quick and easy access to the product as well as an additional space to display and promote your message. You will also benefit from an outstanding visual appearance, excellent adhesive properties, perfect quality and effective added value for your brand-promotion.

It can be printed in up to 10 colours either in roto gravure or digital printing on a variety of base films like MOPP and PET with different thicknesses available. Our state-of-the-art technology guarantees perfect runability on the packaging lines in your production.

Besides the common colours and colour systems we offer high gloss metallic and special effect colour prints, brilliant holographic and de-metallised options, UV-ink or security features like micro print. Furthermore a wide range of overt and covert features for sophisticated security solutions are available. None of these additional features have any influence on the runability of the Tear Tape.

So forget about the message in a bottle. Talk with your consumers. Talk to us first:
